CLIMATE ACTION COMMISSION
SPECIAL MEETING

Wednesday, August 11, 2021, 5:30 PM

Teleconference Location Only-City Hall/Council Chambers, 635 S. Highway 101, Solana Beach, California
This meeting will be conducted in accordance with Governor Newsom’s Executive Order N-29-20 related to the COVID-19 virus.

MEETING LOCATION WILL NOT BE OPEN TO THE PUBLIC. Due to the Executive Order to stay home, in person participation at this meeting will not be allowed at this time. In accordance with the Executive Order to stay home, there will be no members of the public in attendance at this meeting. Alternatives to in-person attendance for viewing and participating in meetings are being provided under Public Participation.

1. CALL TO ORDER

2. APPROVAL OF THE AGENDA

3. APPROVAL OF MINUTES OF PAST MEETING
   A. Meeting of July 21, 2021

4. PUBLIC COMMENT

5. SOCIAL EQUITY CHAPTER – INTRODUCTION AND INITIAL DISCUSSION (15 MINUTES)

6. POTENTIAL BUILDING REACH CODES FOR BUILDING ELECTRIFICATION AND EV CHARGING INFRASTRUCTURE DISCUSSION (30 MINUTES)

7. NEM 3.0 DISCUSSION, INCLUDING CONSIDERATION OF RESOLUTION (20 MINUTES)

8. UPDATE FROM SUBCOMMITTEES:  
   A. PUBLIC OUTREACH  
   B. DECARBONIZATION STRATEGIES (INCLUDING BUILDING ELECTRIFICATION)

9. CCA UPDATE BY STAFF

10. NEW/PROPOSED BUSINESS: New or proposed business provides an opportunity for Commissioners to discuss items not on the agenda but that may be added to the CAC agenda/workload at a future date. Pursuant to the Brown Act, there will be no action taken on these items. All new/proposed business will be placed on a CAC agenda with the approval of the City Manager.

11. ADJOURNMENT

* PUBLIC PARTICIPATION –Public comments at an open session may only be made by submitting a written request to do so via written correspondence to Rimga Viskanta at rviskanta@cosb.org by 12:00 PM before the meeting. Members of the public who would like to listen to the meeting may do so using the following Zoom link: https://cosb-org.zoom.us/j/82641701354?pwd=a2NuMWNKOEdGVGc3VWRzODdVWIV1UT09 Passcode: 180018.

The designated location for viewing public documents is the City’s website www.cityofsolanabeach.org.
CLIMATE ACTION COMMISSION MEETING
REGULAR MEETING AGENDA
MINUTES

Wednesday, July 21, 2021 5:30 PM
Teleconference Location Only-City Hall/Council Chambers,
635 S. Highway 101, Solana Beach, California
This meeting will be conducted in accordance with Governor Newsom’s
Executive Order N-29-20 related to the COVID-19 virus.

Meeting location will not be open to the public. Due to the Executive Order to stay home, in person
participation at this meeting will not be allowed at this time. In accordance with the Executive Order to stay home,
there will be no members of the public in attendance at this meeting. Alternatives to in-person attendance for viewing
and participating in meetings are being provided under Public Participation.

Minutes contain a summary of the discussion and actions taken by the Climate Action Commission
during a meeting. Climate Action meetings are audio recorded. The audio recordings capture the
complete proceedings of the meeting and are available for review.

1. CALL TO ORDER

Chair Goodmacher called the meeting to order at 5:32 PM

Present: Chair Jonathan Goodmacher, Vice Chair Shawna McGarry, Councilmember David
Zito, Paul Basore, Judy Hegenauer, Mary Yang, Michael McClune, Peter Zahn

Absent: Heidi Dewar

Also Present: Dan King, Assistant City Manager; Rimga Viskanta, Senior Management Analyst

2. APPROVAL OF THE AGENDA

Chair Goodmacher requested Item 7 be moved ahead of Item 6.

Motion: Moved by Zahn. Seconded by Councilmember Zito. Approved: 7 yes, 0 no. Motion Carried.

3. APPROVAL OF MINUTES OF PAST MEETING

A. June 16, 2021 Meeting

Chair Goodmacher requested the spelling of Commissioners Basore’s name be corrected in Item 3.
Commissioner Yang requested clarification for item 6A such that the record would reflect that input for
the Social Equity chapter was sought from community members and not yet from the CAC.

Motion: Moved by Zahn to approve the minutes with the suggested changes noted above. Seconded
by McClune Approved: 6 yes, 0 no. Motion Carried.

4. PUBLIC COMMENT
No public comment.

5. JUNIOR COMMISSIONER APPOINTMENT AND APPLICATION PROCESS DISCUSSION

The Commission considered the appointment of Eva Geierstenger as the first CAC Junior Commissioner member. After a few words from Eva and a discussion the motion was made to approve Eva Geierstenger’s appointment.

Commissioner Hegenauer joined the meeting at 5:43 PM.

Motion: Moved by Vice Chair McGarry. Seconded by Councilmember Zito. Approved: 7 yes, 0 no. Motion Carried.

Commissioner Yang suggested a minor edit on the draft application and the Commission agreed on the change.

6. (WAS ITEM 7 ON THE AGENDA) NEM 3.0 - CPUC PROCEEDING – PROPOSED RESOLUTION FOR DISCUSSION

Commissioner Zahn introduced the item and recommended the Resolution be put on next month’s CAC agenda and brought to a vote. Chair Goodmacher reminded the Commission and the Public that the CAC role is advisory to the Council. Resolutions by the CAC are not binding and are only recommendations the Council may choose to consider or not.

There were 4 public speakers speaking in favor of the CAC taking action on the Resolution at the next CAC meeting:

- Karina Gonzalez with Hammond Climate Solutions
- Matt Vasilakis, Co-Director of Policy, Climate Action Campaign
- Shelah Ott, Member of San Diego Building Electrification Coalition
- Lucero Sanchez, Community Policy Coordinator, San Diego Coastkeeper

One speaker urged the Commission to wait 60 days to gather more information and input.

- Joseph Gabaldon, Public Affairs Manager, SDG&E

Mr. King introduced Ty Tosdal, CCA Regulatory Attorney to be available for any questions Commissioners might have on the topic. Commissioner Zahn stated that the Decarbonization Strategies Subcommittee recommends the Resolution be brought to the next CAC meeting. After some discussion a motion was made to bring the CAC Resolution encouraging Council to take a position on the NEM 3.0 proceedings.

Motion: Moved by Zahn. Seconded by Yang. Approved: 7 yes, 0 no. Motion Carried.

7. (WAS ITEM 6 ON THE AGENDA) UPDATE FROM SUBCOMMITTEES:

A. SOCIAL EQUITY – No update.

B. PUBLIC OUTREACH – Vice Chair McGarry reported that the subcommittee will meet with Ms. Viskanta to receive a City website update and review outreach strategy. SeaWeeders and Commissioner Dewar are working to identify additional sites within the City to plant more
Monarch habitat. The Zoological Society plans to feature the newly planted garden at La Colonia as an example site for one of its environmental advocacy classes. The subcommittee expressed an interest in conducting outreach efforts to educate those building ADU’s about the benefits of electrification of ADU’s. The subcommittee also expressed they are ready if asked to do any other electrification outreach. McClune suggested the City create press releases to advertise environmental accomplishments of the City such as the success of the CCA for example.

C. DECARBONIZATION STRATEGIES – (1) Building Electrification; (2) Reach Code Provisions

Ms. Viskanta gave an update about the process the City is following to pursue reach codes. Council gave direction to explore the electrification of certain systems as well as EV infrastructure requirements and permission to engage a pro bono consultant to advise on potential measures. Those suggestions will be brought to the August 25th Council meeting. The CAC and community will have a chance to review and comment on those measures. Zahn and McGarry presented some reach code measures discussed by the subcommittee and reviewed the various provisions included and highlighted items the subcommittee recommends supporting and those that require further discussion or consideration.

8. AUGUST MEETING SCHEDULING DISCUSSION

The Commission discussed the option to reschedule the August meeting in order allow for further discussion of reach code suggestions ahead of the August 25th Council meeting. The decision was made to cancel the regularly scheduled meeting on August 18th and reschedule it as a special meeting. A motion was made to cancel the regular meeting and reschedule as a special meeting when a majority of the Commission would be available. A date could not be agreed upon at the meeting, but subsequently the special meeting has scheduled for August 11th from 5:30-7:00 PM.

Motion: Moved by Zahn. Seconded by McGarry. Approved: 7 yes, 0 no. Motion Carried.

9. CCA UPDATE BY STAFF

Mr. King noted that the City filed its SEA decertification letter with the Public Utilities Commission officially transferring all customers to CEA.

10. NEW/PROPOSED BUSINESS: New or proposed business provides an opportunity for Commissioners to discuss items not on the agenda but that may be added to the CAC agenda/workload at a future date. Pursuant to the Brown Act, there will be no action taken on these items. All new/proposed business will be placed on a CAC agenda with the approval of the City Manager.

Zahn announced that the Encinitas City Council will be considering some reach codes at their August meeting.

Chair Goodmacher would like to bring a social equity chapter draft to the next meeting for discussion and input.

Yang announced that CEC was offering a reach code webinar on July 27th on the Cost-Effectiveness of Battery Storage on Single Family Homes.
11. ADJOURNMENT

Chair Goodmacher adjourned the meeting at 6:48 pm.

Rimga Viskanta, Senior Management Analyst

Approved: August 11, 2021

* PUBLIC PARTICIPATION – Public comments at an open session meeting may only be made by submitting them via written correspondence to Rimga Viskanta at rviskanta@cosb.org by 12:00 PM before the meeting. Oral comments will not be allowed at the meeting. Members of the public who would like to listen to the meeting may do so using the following Zoom link: https://cosb-org.zoom.us/j/83794841030?pwd=TUt1OG9tSVZ3WXE4WXpoL1hWSEZUdz09 Passcode: 197244. The designated location for viewing public documents is the City’s website www.cityofsolanabeach.org.
Climate Impacts and Social Equity
A number of cities throughout the world have declared themselves in the midst of a climate emergency. Solana Beach joined them last year and yet little action has occurred to address this issue. One of the aspects of the climate emergency that has come to the fore is the realization that climate emergencies and climate emergency solutions do not impact communities and diverse populations equally. The benefits and burdens of both the “emergencies” and the “solutions” to the emergencies are felt inequitably. It has been noted repeatedly that economic deprivation and minority status create a greater vulnerability to the effects of climate change. These highly impacted groups suffer more from climate change have poorer health quality, fewer access to resources and adequate housing, and suffer from higher rates of unemployment and underemployment. Spreading the benefits of climate change solutions to low income and minority communities will reduce this burden.

The presence of Climate Change related social injustices around the country demands the development of equitable solutions. It is also clear that unless Climate Action Plans deal with these inequities pro-actively, the inequities will continue to exist and flourish to the detriment of all our communities and will impact our ability to sustain and plan a high-quality future for all of our residents. It seems evident that our Climate Action Plans must create policies to deal with existing inequities and those likely to emerge in future scenarios if B.A.U. (Business As Usual) processes are allowed to continue. Fortunately, many cities, large and small, have created and appear to be continuing to create energy systems (CCAs) that promote clean fuels and result eventually in revenue for the cities. The cities can utilize all or a portion of that revenue to invest in local or regional programs that will help alleviate inequities.

Solana Beach as a Community

Solana Beach is a small fairly wealthy community in northern coastal San Diego County. According to SANDAG (www.sandag.org) median home prices in Solana Beach are more than twice as high as those in San Diego County as a whole.

According to the December 2020 Draft Housing Element (Housing Element) issued by the city our current population of approximately 13,000 is expected to increase 14% to nearly 15,000 by 2050. According to the Housing Element Solana Beach’s population has been skewing older since 2000. The Housing Element notes other changes in Solana Beach’s population from 2000 to 2017 including decreases in the percentage of the population identified: as white (from 87% to 83.4%) and Hispanic or Latino (from 14.8% to 11.5%). At the same time the percentage of Solana Beach’s population identifying as Asian increased from 3.5% to 5.1%. Similar increases occurred in other populations including black, American Indian or Alaska Native, Native Hawaiian or Other Pacific Islander, Other Races, Two or More Races.

Understanding the nature of the population is important. An aging population has different and/or changing needs for housing due to changes in accessibility and accommodations that may be required. Further, it has been shown that many older residents lack either access to or the ability to use modern information technologies e.g., the internet, email, or cellular telephones.

Understanding the ethnic and racial profile of a community is important as race and ethnicity correlate closely with income level and poverty. Both of which impact housing needs. According to the Housing Element, although the majority of Solana Beach’s population is white, poverty is highest among our city’s minority populations.

The Housing Element also provides information on the household income of Solana Beach’s residents by breaking it down using Area Median Income (AMI) levels identified by the State of California Department of Housing and Community Development. According to the Housing Element in 2017 approximately 24% of households in Solana Beach fall into the low to extremely low-income categories. The levels and percentages of our population in each category as shown in the Housing Element are presented on Table One below.
<table>
<thead>
<tr>
<th>Income Category (Percent of County AMI)</th>
<th>Number of Households</th>
<th>Percent of Households</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extremely Low (30% of AMI or Less)</td>
<td>330</td>
<td>5.7%</td>
</tr>
<tr>
<td>Very Low (31 to 50% of AMI)</td>
<td>355</td>
<td>6.2%</td>
</tr>
<tr>
<td>Low (51 to 80% of AMI)</td>
<td>695</td>
<td>12.1%</td>
</tr>
<tr>
<td>Moderate or Above (over 80% of AMI)</td>
<td>4,365</td>
<td>76%</td>
</tr>
</tbody>
</table>

As presented in the Housing Element the population of Solana Beach in 2017 differs from the San Diego County averages in the following ways:
* Our percentage of people under the age of 18 is slightly less (~16% in Solana Beach vs. 22% County-wide);
* Our percentage of people over the age of 65 is quite a bit higher (~23% in Solana Beach vs. ~13% County-wide);
* Our percentage of people living in poverty is less (8% in Solana Beach vs. 12% County-wide);
* Our percentage of people who are non-English speakers at home is less (21% in Solana Beach vs. 36% County-wide);
* Our percentage of people with a less than high school education is less (6% in Solana Beach vs. 15% County-wide)

From the numbers and discussion outlined it is apparent that although we are a fairly wealthy community compared to others in the San Diego area, we still have a significant fraction of our population that is: 1. older, 2. living in poverty, and 3. non-English speakers at home. An aging population in a community is important to note because of the changing or additional needs in housing costs, accessibility, and accommodations that an aging population may require. According to the Housing Element nearly 40% of households in Solana Beach experience one of four housing problems (e.g., units with physical defects, overcrowding, cost burdens including utilities exceeding 30% of gross income). In addition, the high percentage of non-English speakers in our population mandates that city documents and outreach be available in languages other than English.

**Solana Beach and Environmental Justice**

Another way to look at our community is to review its status with regards to Environmental Justice (EJ). Both the United State Environmental Protection Agency (EPA; [https://eiscreen.epa.gov/mapper/](https://eiscreen.epa.gov/mapper/)) and the State of California (State; [https://calenviroscreen-oehha.hub.arcgis.com/](https://calenviroscreen-oehha.hub.arcgis.com/)) have map-based websites that present Environmental Justice criteria by geographic area, city limits, Census Tracts, etc.

The EPA EJ Index combines environmental and demographic data to come up with a score for a given geographic area (city, census tracts, etc.). The scores for that are ranked and can then be compared to percentile scores for the state, EPA Region, or that country as a whole. There are eleven environmental indicators that are evaluated. These are:

* National Scale Air Toxics Assessment Air Toxics Cancer Risk
* National Scale Air Toxics Assessment Respiratory Hazard Index
* National Scale Air Toxics Assessment Diesel PM (DPM)
* Particulate Matter (PM2.5)
* Ozone
* Lead Paint Indicator
* Traffic Proximity and Volume
* Proximity to Risk Management Plan Sites
* Proximity to Treatment Storage and Disposal Facilities
* Proximity to National Priorities List Sites
* Wastewater Discharge Indicator

Per the EPA, Solana Beach as whole ranks in the lowest half of California (meaning that we are better off than at least half of the state) with respect to most of the environmental indicators. However, there are two environmental indicators in which the city ranks poorly. These are proximity to traffic and to wastewater discharges.

The Draft State of California CalEnviroScreen 4.0 uses similar (but not identical) criteria (environmental indicators and demographic information) to the EPA to rank communities in terms of their Environmental Justice scoring. On the CalEnviroScreen website it is possible to quickly evaluate smaller portions of the city (census tracts) to examine their rankings. There are four census tracts in the City of Solana Beach. The attached map shows the approximate boundaries of these tracts. Note that Tracts 173.05 and 173.06 do include areas just outside the city limits.

![Map of Census Tracts in Solana Beach](image)

**MAP OF CENSUS TRACTS IN SOLANA BEACH**

Per the draft CalEnviroScreen 4.0 website, exposures for each of the census tracts in Solana Beach are negatively scored compared to the rest of the state (above the 50th percentile) for Traffic. The exposures above the 50th percentile for each of the four census tracts are shown on Table 2 below.

<p>| Table Two – Census Tracts and CalEnviroscreen 4.0 Scoring Exceedance of 50th Percentile |</p>
<table>
<thead>
<tr>
<th>Census Tracts</th>
<th>Category Exceeding 50th Percentile</th>
<th>Percentile Ranking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Census Tract 173.03</td>
<td>Diesel Particulate Matter</td>
<td>77</td>
</tr>
<tr>
<td></td>
<td>Traffic</td>
<td>90</td>
</tr>
</tbody>
</table>
The draft CalEnviroScreen 4.0 website also ranks “Environmental Threats” on a similar percentile scale. Again, a percentile value above 50 indicates a score that exceeds the rest of the state. The “Environmental Threats” above the 50th percentile for each of the four census tracts are shown on Table 3 below.

<table>
<thead>
<tr>
<th>Census Tracts</th>
<th>Environmental Threats</th>
<th>Percentile Ranking</th>
<th>Possible Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>Census Tract 173.04</td>
<td>Impaired Waters</td>
<td>52</td>
<td>Proximity to polluted or impacted San Elijo Lagoon</td>
</tr>
<tr>
<td></td>
<td>Groundwater Threats</td>
<td>61</td>
<td>Proximity to polluted or impacted Stevens Creek</td>
</tr>
<tr>
<td></td>
<td>Impaired Waters</td>
<td>60</td>
<td></td>
</tr>
<tr>
<td>Census Tract 173.05</td>
<td>Groundwater Threats</td>
<td>64</td>
<td>Proximity to polluted or impacted San Elijo Lagoon</td>
</tr>
<tr>
<td></td>
<td>Impaired Waters</td>
<td>64</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Solid Waste</td>
<td>52</td>
<td>Proximity to closed landfill</td>
</tr>
<tr>
<td>Census Tract 173.06</td>
<td>Groundwater Threats</td>
<td>61</td>
<td>Proximity to polluted or impacted San Elijo Lagoon</td>
</tr>
<tr>
<td></td>
<td>Impaired Waters</td>
<td>60</td>
<td></td>
</tr>
</tbody>
</table>

Finally, the draft CalEnviroScreen 4.0 website also ranks “Socioeconomic Factors” on a similar percentile scale. Only one of the census tracts in Solana Beach is ranked above the 50-percentile compared to the rest of the state. Census Tract 173.04 ranks poorly on Housing Burden. The State of California defines Housing Burdened households as those low-income households that are highly burdened by housing costs. These households are typically lower income and must spend a larger proportion of their income on housing. As a consequence, they may suffer from housing-induced poverty. According to data presented on the CalEnviroScreen 4.0 website nearly 24% of the population in Census Tract 173.04 are Housing Burdened. An unacceptable number in such a wealthy community.

**Climate Impacts, Social Equity, and Goals**

Policies and appropriate measures and future targets must be designed and implemented that will do the following:

* Create an outreach program that appeals to all residents, all income levels, and all populations that describes benefits and burdens of Climate Change plan components (this program needs to available in multiple languages and to those unreachable by electronic means)
* Design and implement a clean transportation (electric bus) program that will be beneficial to all residents and all populations, including transit stops (centers/hubs) sited throughout the City;
* Partner with the CEA to provide free home energy audits and upgrade incentives for low-income households;
* Invest in programs that provide clean energy generation upgrades for low income and senior residents. This includes weatherization and conversion to clean electric appliances instead of indoor and outdoor polluting gas appliances;
* Partner with local colleges and universities to provide educational and workforce opportunities in clean tech;
* Create the opportunities by making housing available for all people to live and experience the environment that we treasure here in Solana Beach regardless of their income level;
* Ensure that all new construction, especially multiunit dwellings, meets high quality energy standards (zero net energy) to reduce energy use and heating costs;
* Create opportunities for gainful employment in the immediate area to reduce the need for commuting. This includes allowing the conversion of existing retail buildings to offices;
* Create training programs in conjunction with local colleges and universities for local residents to give them the opportunity to participate fully in the economy we are hoping to create.

H Judy, Lsa and Jonathan,

I have been very rem ss n not rep y ng sooner to comment on your data ed and we wr tten commentary that we d scussed n June and want to extend my heartfelt app ng. I dashed off a repay soon after our meet ng and thought I had sent t, wh en real ty t sat n mbo among a group of messages that my a ng/dy ng phone had fa ed to send. Unt I spoke to Judy on Saturday, I thought t had reached you. I dug through my ema to find t n my drafts :-(). Read ng t through aga n, I rea zed that your work mer ted a much more thoughtfu and thorough set of comments than I had gathered, so I scrapped t and began anew. I hope th s vers on s of use.

My mpress on of your document was and s that t s a carefu y thought out d st at on of an mpress ve breadth and depth of know edge. It proceeds og ca y and usefu y from the gener a to the part cu ar, end ng encourag ng y on a note of hope. It shou d be a useful adjunct to the SB C mate Act on P an and the C mate Change Emergency Dec arat on. I understand that t must reta n a genera perspect ve even SN the part cu ars, g ven that the peop e us ng th s document t he future w be fac ng d ferent (and probable y more urgent) cu rstances than we do today. The deas are a good ones: partner ng a s a parts of our commun ty to educate use ves and get feed back and deas for act ons that cou d use ncen ves, job tra n g and adaptat on on measures to ach eve res ence and eq u ty n hous ng, jobs, educat on, hea th and we ness as our CO2 eve s re. A ong w th my apprc at on at on for the work you have done are some suggest ons, wh ch I ve grouped by the subhead ngs of your document.

Solana Beach as a Community
It was nterest ng to earn about the breakdown by race, ethn c ty, ncome and educat on n So ana Beach. As a sma geograph c area we do share many of the same arger env ronmenta concerns. Just as we don t a ways know much about someone from a d ferent part of So ana Beach though, we can a so neg ect the concerns of those w th dr t er a r to breathe or a nearby ag ng and . The C mate Act on Comm ss on does no th ng, but 1 t me t for So ana Beach ans to come to gether to take a more act ve ro e. I d ove to see a c t zen s group start that can he p educate and nsp re commun ty members to step up to become, say, a c t zen sc ent sts, test ng ng a r, water and so qua ty for nstance, and po cy and eg s at ve advocates for change n the county and beyond.

Policy Statements
W th our bans of p ast c bags, straws, po ystyrene and p ast c cut ery at oca bus nesses, So ana Beach has been ead ng the env ronmenta charge n recent years. Then, So ana Beach worked to become a c ty w th a CCA. It seemed that we were on a ro . Documents put out by the c ty s nce then have been cag er about dent fy ng next steps, espec a y to m t gate c mate change. So I got on the nternet and made some nterest ng d ecover es. The Env ronmenta Hea Th Coa ton n south coasta San D ego and Comm un t es for a B e tte En v ronment were two exce ent resources. Many d rect steps to m t gate c mate change are tak ng p ace n po ut on-r dden commun t es ke Barr o Logan and Nat ona C ty w th under-represented popu at ons. Act v sts there aren t wa t ng fo r c ty or state governments to someday address the r cns cns. They are mob n g and ead ng changes to better the r hea th and the a r they breathe, wh ch s a so a w n for c mate change. So when we ta k about mak ng changes, and "br ng ng n" representat ves from these commun t es, we must be ready for them to not on y be present but to ead the eﬀort! Look ng on the r webs te, I was struck by e ements we wou d do we to borrow from: dec ar ng ourse ves as a "10-m nute commun ty", for nstance wou d be an exce ent ent start. The SALTA curr cu um wou d be a great way to tra n up pass onate peop e for nstance. So to recap, when we ta k about oca po cy makers nc ud ng underserved commun t es, we can a so hope that they et us he p them too.

Solana Beach and Environmental Justice
I was g ad to earn about the d ferent metr cs and data that ex st for So ana Beach. It shocked me to read n your report that "So ana Beach ranks n the owest ha f of Ca forn a... w th respect to most of the env ronmenta nd cators as a who e" and that we rank much ower for traﬃc and wastewater d scharges. Somehow I never thought of sunny So ana Beach as an ep center of env ronmenta prob ems. Go ﬁgure. I apprc ated the breakdown by area of So ana Beach for the dangers ment oned, and rem ded myse f that ng fur ther from say, denser a r po ut on s no protect on as I move n those areas a the me. I agree that Stevens Creek s dra nage and hous ng nequ t es are two areas of mpact. We can presume that pes c de concentrat ons come from past agr cu tura but what f a who e that ng hghborhood has the hab t of ng ng more pest c des? That s someth ng we cou d do someth ng about and mer ts a deeper d ve. As we , I understand that the cars to and from other commun t es that po ute So ana Beach zoom n and out beyond our contro . But don t we do the same th ng to them? If we (c t zen sc ent sts) beg n co ect ng data on a r qua ty at d ferent p acs and t mes, that cou d nsp re other ng hghor ng comm un t es to do the same, and g ve us data to present at county and state eve s to make po cy/infrastruct ure changes, and perhaps nsp re more buses and more bus stops at c oser rterva s.

Reason to Hope
There s ndeed ev dence that many jur sd ct ons and orgs are see ng the beneﬁts of p ann ng comm un t es d ferent y. I m g ad that the CAC supports adopt ng an a -ect c code for our hous es and bus nesses, and opt ons for further upgrades. Aga n, I have to say that our fe ow act v sts, BIPOC and otherw se, n many commun t es are a ready adv ocat ng for c ean energy. It s t me to work to gether and earn from each other as we grow, we hope, nto a more susta nab e future.

W th be ated thanks for the work you are do ng,

And

PS - sa n be sor of my wa ear ng. I d owe o hear wha your reac ons are on.
On Thu, Jun 29, 2021 at 9:21 AM Judy Hegenauer <judy.hegenauer@<redacted>> wrote:

Had es, I am still hoping for feedback from you regarding the Smoke Act report that Jonathan and I developed. It is intended to go to Council soon and ultimately become part of the C more Act on P an. Is there anything I can do to urge you to help us out? I believed that you were both agreeable to providing feedback to us after reviewing our document. Was I wrong? HELP!

Judy
Greetings Judy, Jonathan and Andy.

I send my apologies for not sending my input to you on this important document sooner. I serve on three nonprofit boards which takes up most of my free time, and we have completed judging of the International Latino Book Awards (of which I read and judged 16 books this summer).

I've had a chance to review the document you would like to present to the city, and here are my suggestions.

Be more specific on the ethnic groups impacted by inadequate housing, underemployment, and language barriers. For example, Latino residents are the largest ethnic group in Santa Barbara and they are greatly impacted by lack of housing, underemployment, education, and language barriers.

La Coa on de Eden Gardens needs to be mentioned in this document, because it was the first official neighborhood of Santa Barbara (even though it was a racially segregated neighborhood) and it is celebrating its centennial this year. Can you include the gentrification dilemma of La Coa on as we as the entire city?

Outreach:
The City of Santa Barbara must make a concerted effort to reach the Spanish-speaking population through correspondence, such as emails, social media, surveys, public meetings, etc. Basically any public announcement in English needs to be provided in Spanish.

Just recently, the City of Santa Barbara sent out a survey to residents about the renovation of La Coa on Community Park playground and the Felter Cove playground. The survey was only provided in English, therefore only residents who are fluent in English responded. I immediately contacted the Mayor and City Manager about this and received an apology and remedy to the dilemma. However, there must be a process the City puts in place to ensure a matter such as be automatized provided in Spanish to our residents. The residents did receive the survey in Spanish, but it took them much longer to respond than English-speaking residents.

Data and Development:
Could you include a piece about the need for the City to outreach to our non-tech savvy seniors? I know several of them on the Santa Barbara CVSC and Historical Society Board. I read your document that our city has a strong population of seniors, so find ways to outreach to our seniors to make sure they get important information needs to be a priority. When surveys are sent in electronic format on you, we are m noting our non-tech savvy community, as we as those who cannot afford a computer.

If the City does not make Outreach to a members of the community a huge prority, crime will increase, social just ce and equity will fa, because not a members of the community will be represented.

The use of BIPOC:
I do not advocate the use of the term BIPOC (Black, Indigenous, People of Color), as do many of my colleagues. The reason being is that Latinos are left out of the term. Why st Black and not ncude Latino? Latinos have a significant story in America and we should not fa under the People of Color category.

Use of the word Poor. Can we find a better word for Poor. Maybe we can use econom ca y d sadvantaged or ow ncome?

These are my suggestions to the document you have written. Thank you for giving me the opportunity to offer my suggestions. If you would like to discuss these suggestions, I will have time tomorrow to chat at [insert phone number]. I just need to know when you plan on reaching out, so I can have my phone near me.

Sincerely,
Lisa

H Judy,

I am back from a brief trip to visit family and wanted to check to see if we are still on for tomorrow. Please let me know when you can.

Thank you,

Jonathan

>> Hlsa and And, I’m so glad that you are both available. We’d like to meet at my house (outsde) on Thursday, May 20th at 3:00pm. I’ve at [redacted] across from the Water District property (which I think will become one of the Butterfly Garden areas). YEH! There’s lots of parking available. I’ve asked Jonathan to get a copy of the document/chapter to you before we meet. I don’t expect this to take a lot of time. However, justce and justce are wgg y creatures wth many, many different options. Our goal, I think, is to design a chapter that helps certain organizations prevent or avoid unfortunate outcomes for sub-communities with limited resources and barriers to quality situations. Since I’m from Michigan my favorite bad example is Flint. I’m looking forward to seeing you and getting the Chapter moving forward. Please let me know if arrangement suits works for you.

>> Sincerely, Judy
A RESOLUTION OF THE SOLANA BEACH CLIMATE ACTION COMMISSION
RECOMMENDING CITY COUNCIL ACTION REGARDING
THE NET ENERGY METERING (NEM3) PROCEEDING
PRESENTLY BEFORE THE CALIFORNIA PUBLIC UTILITIES COMMISSION

The Solana Beach Climate Action Commission hereby finds and declares the following:

WHEREAS, Net energy metering (NEM) is designed to support the installation of customer-sited renewable energy generation; and

WHEREAS, NEM allows customers to receive bill credits for power generated by their solar system and shared with the power grid and ultimately save money on their utility bills; and

WHEREAS, NEM is what has allowed solar to become increasingly accessible to low and moderate income households; and

WHEREAS, the California Public Utilities Commission (CPUC) has launched a formal proceeding to update the current NEM structure to be introduced in 2022 as NEM 3.0 and a number of parties have submitted their proposal for what they believe NEM 3.0 should look like; and

WHEREAS, the California Investor Owned Utilities (IOUs), Pacific Gas and Electric, San Diego Gas & Electric and Southern California Edison, have submitted a joint proposal (the “IOU Proposal”) that calls for drastic changes to NEM that would make customer-sited renewable energy more expensive, increase the amount of time it takes for customers to pay off their systems, and ground to a halt the installation of distributed solar in California; and

WHEREAS, The IOU Proposal would make it impossible for customer-sited renewables to continue to grow sustainably as mandated by law as a result of high monthly fixed fees for all solar installations, and slashing credits customers receive for sharing their excess electricity with the power grid; and

WHEREAS, proposals submitted to CPUC by Protect Our Communities Foundation, California Solar & Storage Association, Vote Solar, GRID Alternatives, Solar Energy Industries Association, and others not only would encourage new solar adoption but also include additional subsidies for low income customers; and

WHEREAS, California cannot meet its clean energy targets in time with utility scale solar alone and needs to triple the amount of rooftop solar, as reported by the California Energy Commission 2021 SB 100 Joint Agency Report Summary; and
WHEREAS, the cleantech industry provides over $8.2 billion in economic benefits, as reported by Cleantech San Diego; and

WHEREAS, the San Diego County rooftop solar industry provides over 9,000 jobs to the region, as reported by the Solar Foundation Solar Jobs Census; and

WHEREAS, protecting rooftop solar and expanding access to rooftop solar in communities of concern will help California move toward 100 percent clean energy, lessen the impacts of the climate crisis, and reduce climate injustices from dirty energy; and

WHEREAS, we are in a climate crisis and need to make the transition to clean energy more accessible;

NOW, THEREFORE, THE SOLANA BEACH CLIMATE ACTION COMMISSION DOES HEREBY RESOLVE AS FOLLOWS:

1. That the Commission supports protecting and expanding rooftop solar via a strong succeeding NEM tariff and expanding clean energy access by making it easier, not harder, for people to adopt rooftop solar and energy storage in order to meet California's ambitious clean energy targets and deploy solar in all communities and households, particularly those struggling to pay for electricity; and

2. That the Commission requests the Solana Beach City Council adopt a resolution:
   (a) expressing its support for the items as stated in numbered paragraph 1 immediately above;
   (b) urging the CPUC to (i) strengthen NEM to expand access to all households, particularly of low-and-moderate income; (ii) expand access to other clean energy technologies that pair with solar, such as batteries; (iii) ensure that the solar installations continue to grow in order to meet State and City climate goals; and (iv) exclude provisions set forth in the IOU Proposal such has high monthly fixed fees, and reducing or eliminating credits for sharing electricity with the power grid.

PASSED and ADOPTED by Solana Beach Climate Action Commission, City of Solana Beach, California this 21st day of July 2021, by the following vote:

AYES:

NOES:

ABSTAIN:

ABSENT:

MEASURES FOR CONSIDERATION IN A SOLANA BEACH REACH CODE

These standards are proposed to apply to all newly constructed buildings and substantial remodels in Solana Beach. The standards will ensure that new construction within the City is healthier for occupants, has a reduced greenhouse gas impact, and can result in operational cost savings over the life of the building.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Proposed Requirements</th>
<th>Considerations</th>
</tr>
</thead>
</table>
| PV on new commercial building construction | ● Proposed Requirement: Newly constructed commercial properties require an on-site solar electricity generation system of 3kW or more.  
● Background: Solar photovoltaic technology can offset the electricity needs for new buildings in support of climate action goals and local system reliability.  
● Cost implications: Solar photovoltaic systems on new commercial construction are cost effective across modeled non-residential scenarios including retail buildings, office buildings and hotel buildings. Solar is already required by the state energy code for low rise residential buildings.  
● Greenhouse gas impacts: The amount of GHG savings varies by the size of the characteristics of the building and the size of the solar system. | ● A minimal system (3kW) up through a larger system (80kW) can be required cost effectively.  
● Carlsbad requires:  
  ○ 10,000 sf and above: 15 kilowatts direct current (kWdc) per 10,000 square feet  
  ○ Buildings <10,000 square feet: minimum 5 kilowatt system  
● Scale of solar requirements depends on electrification requirements. The more systems that are electrified, the more cost-effective solar becomes.  
  ○ If multifamily were all-electric construction they too could be required to install solar. |
| Energy Reach Code - Water, Heating, Dryer Systems | ● Proposed Requirement: In new construction, all space conditioning, water heating (including pools and spas) and clothes dryers will be electric only.  
● Background: More than 80 percent of a building’s energy use relates to heating/cooling space and heating water. Natural gas is fossil fuel that is typically used for drying clothes, heating space and water for building occupants. As allowed for under the state energy code (title 24, part 6), cities can adopt reach codes to meet specific needs within their community. This measure would also reduce future energy use, natural gas use, and reduce the number of heating and drying systems. | ● Most cities have stayed mute on outdoor propane use  
● Santa Monica, among others, includes pools and spas in water heating definition and requires solar thermal water heating and/or heat pumps for those applications as well.  
● Other impacts to consider when evaluating this measure:  
  Commented [1]: 4.201.3 Pool Heating.  
  (a) For new pool construction, if the pool is to be heated, an electric heat pump water heater or a solar thermal system shall be used for such heating. |
greenhouse gas emissions and help the City reach its climate action goals.

- **Cost implications:** Based on studies conducted by the statewide Codes and Standards Team, electrifying the above listed building systems and appliances is cost-effective.

- **Greenhouse gas impacts:** According to the 2018 RMI report, *The Economics of Electrifying Buildings*, 87% of building end use emissions come from space and water heating. Please note: this number does not account for the methane leakage from gas infrastructure.

<table>
<thead>
<tr>
<th>Electric Readiness</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Proposed Requirement:</strong> Add raceways and electrical capacity for future electrification of all non-electric appliances. Electric ready measures include panel capacity and raceways (or conductors) from the electrical panel(s) to the location of each gas outlet sufficiently sized to meet future electric power requirements at the time of construction so that wall penetrations and demolition work is avoided at or minimized when the gas-powered systems and appliances are converted to electric-powered systems.</td>
</tr>
<tr>
<td><strong>Background:</strong> This measure is intended to simplify and reduce the cost of future natural gas to electric retrofits. In some cases, electric appliances require more room in the building than natural gas appliances and a source of outside air. Designing and constructing for the future electrification of appliances during initial construction reduces the cost and potential installation delays sometimes associated with natural gas to electric retrofits.</td>
</tr>
<tr>
<td><strong>Cost implications:</strong> This measure does have a relatively small upfront cost implication and potentially significant future retrofit cost avoidance. No energy savings comes directly from this measure so there are no operational cost impacts.</td>
</tr>
<tr>
<td><strong>If action is not taken, retrofit costs will be higher for future homeowners.</strong></td>
</tr>
<tr>
<td><strong>Dozens of cities have added electric readiness to their codes and there is a proposed statewide requirement anticipated to take effect January 1, 2023.</strong></td>
</tr>
<tr>
<td><strong>If water heating is not included in the reach code, design requirements (including a designated installation location) should be included in this language to allow for the conversion to heat pump water heaters.</strong></td>
</tr>
<tr>
<td><strong>Commented (3): Do we need to include propane here? Is that common in Solana Beach?</strong></td>
</tr>
<tr>
<td>EV Infrastructure</td>

building code (title 24, part 11 the section in which electric vehicle regulation is covered), cities can adopt reach codes to meet specific needs within their community.

- **Cost implications:** Initial costs vary based on the selected technology, location and whether or not the parking infrastructure is new or existing. However, installing all of the panels and underground work at the time of initial construction is the least expensive option compared to future retrofit costs.
- **Greenhouse gas impacts:** On a per parking space basis, as part of the 2019 CALGreen EV code development, the California Air Resources Board estimated between 8 and 17 metric tons in avoided greenhouse gas emissions annually per EV ready multifamily space in 2025.

### New Construction definition

- **Proposed Requirement:** For the purposes of the reach code measures outlined above, new construction for single family includes newly constructed additions over 500 square feet and improvements in existing buildings where more than 50% of exterior walls of the existing structure is being remodeled. For commercial and multifamily projects, newly constructed additions of larger than 2,000 square feet or existing building improvements valued at more than $1,000,000 shall comply. For the electrification specific measure, the reach code applies if the scope of the remodel includes replacing space heating, water heating or clothes dryers.
- **Background:** The intent of this definition is to clarify the scope and implementation of the proposed reach code measures.
- **Cost implications:** Costs are addressed under individual measures above.
- **Greenhouse gas impacts:** Impacts in general are addressed under individual measures above. More existing building

| | o **Multifamily Residential and Hotels:** At least 15% of parking spaces will be equipped with a functional EVSE.  
| | o **Non-Residential:** At least 8% of parking spaces will be equipped with a functional EVSE. (this includes additions and alterations greater than 10,000 square feet.)  
| | - Some jurisdictions have exceptions or waiver process to protect against excessive costs, for example where a reasonable cost estimate in excess of $4,500/space is shown.  

- In a review of what jurisdictions have adopted, the definition can range from 50% -75% of floor area and/or exterior wall. Some jurisdictions followed FEAM and used valuation.  
- Carlsbad applies their PV reach code to all new construction and alterations based on project size (>2000 square feet) or value ($>1,000,000).
projects that add PV, EV charging and electric appliances should result in additional greenhouse gas savings.
